

Tomo.Living

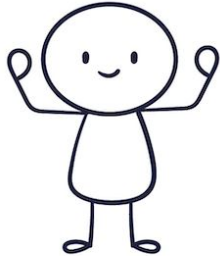

Jack Sigler, Sam Abderholden, Tommy Jernigan

Problem Definition

- **Make coliving easier**
- Details can be **reduced to noise**
- Responsibilities are **fragmented**
- **Communication is hard**
- Everyone **deserves** to have a organized living space

Trash every 1st &
4th Tuesday of the
month

Pay me \$34.5 for the
new house vacuum

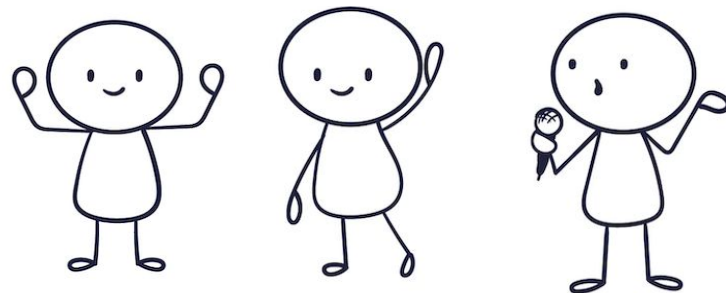

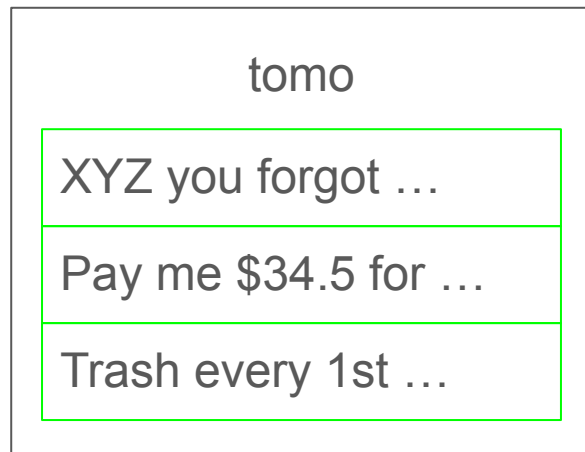

XYZ you forgot to
clean the bathroom

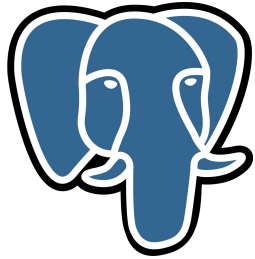

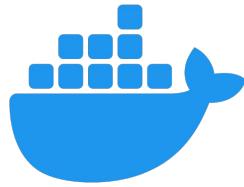

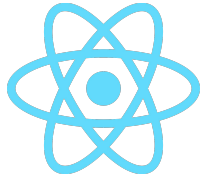

Proposed Solution

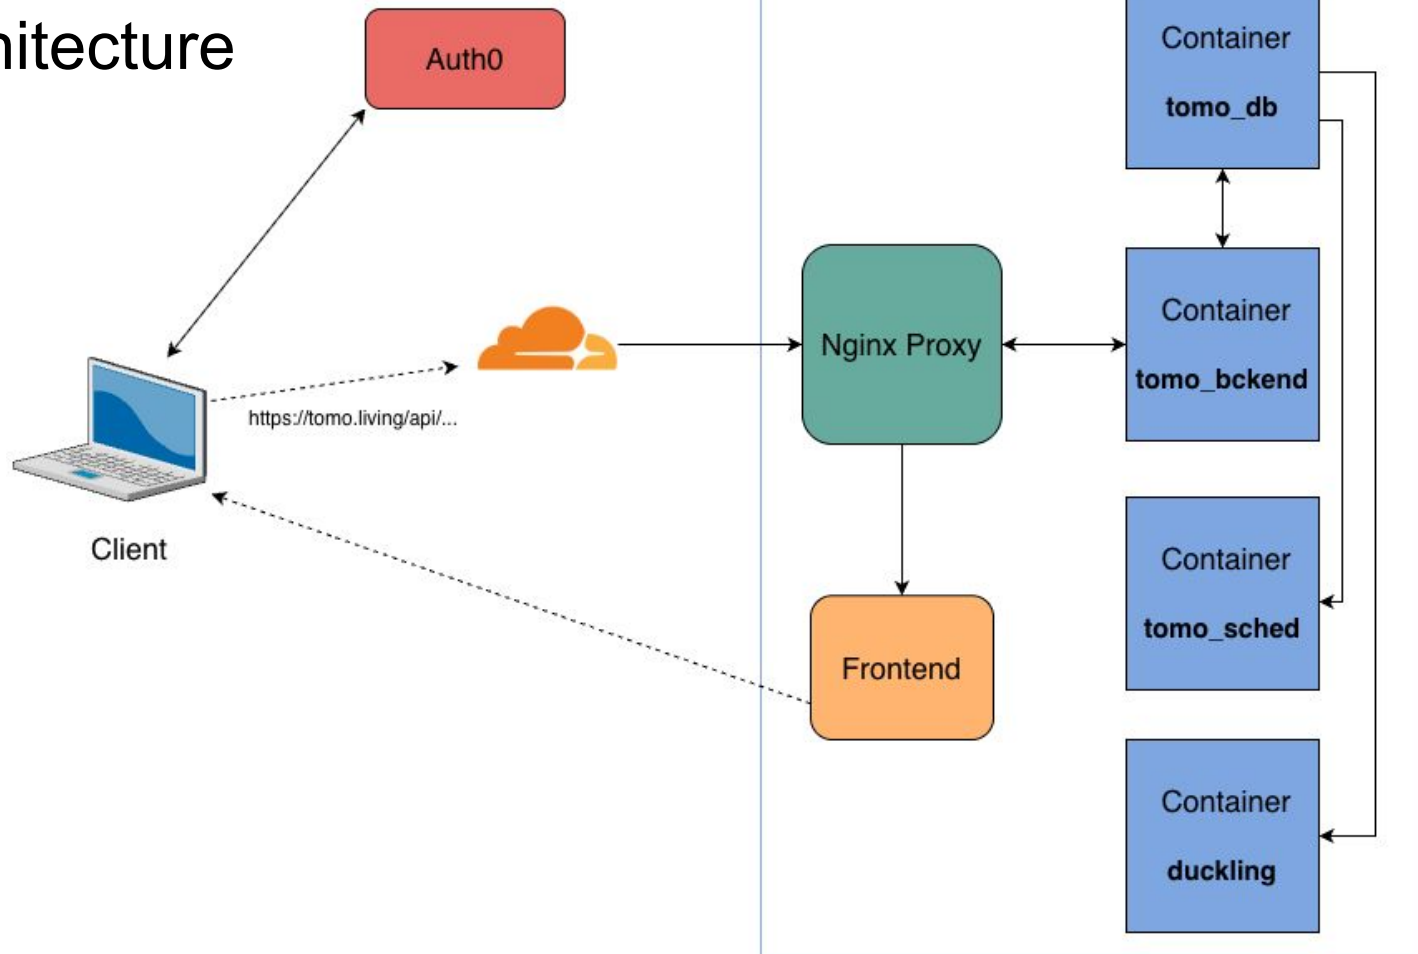

- Unified Household Platform
 - Group calendars
 - Email reminders
 - Treat Tomo as another roommate
 - Bill / payment splitting

Tech Stack

System Architecture

Demo

New Features

Vibe Coding

- Incorporated different types of tools
 - IDE Integrated Agents: Claude, Codex
 - ChatGPT / DeepSeek
- General Principles
 - Build high level architecture ourselves
 - Provide high levels of context
 - Human verification (depends on vibe)
- Overall Thoughts

Next Steps + Vision

- Overhaul of UI to make it more polished
- Get Twilio to approve our toll-free request
 - Took > 2 weeks to even hear back, by the time they responded it was too late to re-request it and have it working in time.
 - Need “opt-in” for users, which we can use email as a fallback.
- Allow users to respond via email to cancel, create, modify reminders/events
- Incorporate more functions of co-living -> recipes, cooking, chores etc
- More direct syncing with native applications (calendars, grocery stores, billing)

Thank you!
